

TOWARDS ZERO INFECTIONS

Avidicare Maintenance Services

Any high performing ventilation system requires regular maintenance

Ventilation systems for infection sensitive surgery require regular maintenance to ensure continuous, optimal, and long-lasting functionality. Avidicare and our international partners offer effective and reliable services to guarantee ultra-clean air and the highest degree of patient safety in your operating theatres. Our maintenance services are flexible and can be requested on demand or delivered at regular intervals tailored to your needs.

Avidicare's maintenance offering consists of three specific services:

SYSTEM INSPECTION

The system inspection aims to generate a comprehensive status report of your ventilation system. We measure air flow, air pressure, temperature, and other vital parameters that are necessary to ensure ultra-clean air and the highest patient safety. All filters are inspected and tested. This service provides you with a thorough status report of your ventilation system to reveal deviations that can be adjusted swiftly.

MICROBIOLOGICAL (CFU) MEASUREMENT

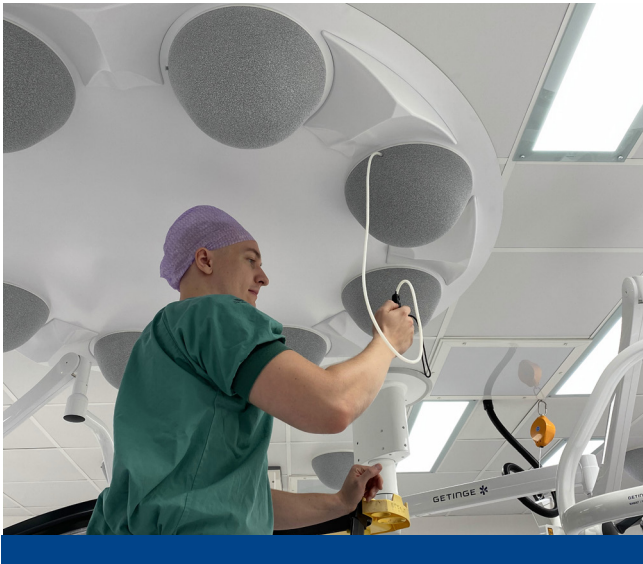

Our highly trained staff will measure bacterial levels in the air during live surgery at critical and infection sensitive locations in the operating theatre. Microbiological (CFU) measurement is the best test method to ensure that you have ultra-clean air in your operating theatres when it really matters.

FILTER AND AIR SHOWER REPLACEMENT AND TESTING

We ensure that filters and airshowers are replaced at necessary intervals, and properly tested to ensure ultra-clean air in the operating theatre.

Avidicare as a service partner

Avidicare is at the forefront of innovation, technology, and high-end ventilation solutions. For more than fourteen years, our Obregon-series ventilation systems have delivered ultra-clean air in operating theatres for infection sensitive surgery around the world. When you invest in an Opron-solution, you invest in a close relationship with experts on ventilation and infection prevention. Our maintenance services play a vital role in this process. Together with our international partners, we are always close at hand to assist you.

Avidicare services support you and increase the value of your investment

Alongside our maintenance service offerings, Avidicare's complete service portfolio includes:

- **Educational services** provide training of how the Opron system works and how the risk of airborne infections can be reduced. They also include training in the digital services and other tailored training.
- **Development services** help you to optimally integrate the Opron system into the operating suite as well as specific customizations of the digital services.
- **Maintenance services** ensure that the Opron system is functioning optimally. A service agreement can be signed for one or more years and contain one or several functions.
- **Customer improvement services** consist of the digital services that help you secure your daily operations by gaining better control, but also improving processes and working more efficiently. Three levels of digital services are available to provide increasing opportunities for improvement.

Please contact us to learn more about a tailored maintenance solution for your facility.

Together Towards Zero Infections

Avidicare is committed to the vision "Towards Zero Infections". We work together with healthcare professionals and partners to eliminate airborne infections, especially Surgical Site Infections, in medical facilities.

Today, there are more than 300 Opragon installations protecting patients and staff at leading academic hospitals and specialist clinics in Europe and in the United States. This has allowed for extensive scientific validation of the benefits of the Opragon System including establishing large and robust ultra-clean surgical work areas with low energy use, high installation flexibility and excellent working conditions.

The system is customizable for any surgical workflow and clean hospital area including operating theaters, labs, CSSDs, ICUs, isolation rooms and pharmacies. A set of personal and digital services allow for lifelong reliability.

Avidicare holds six patents and is ISO-certified for quality and environment. The headquarters is based at Medicon Village in Lund, Sweden.
