

TOWARDS ZERO INFECTIONS

Opragon Online

Digital Services for Remote Monitoring 24/7

Ensure optimal environmental conditions for
less risk of infection for both patients and staff

OPRAGON ONLINE DIGITAL SERVICES have been designed to provide 24/7 visibility into environmental conditions in your operating rooms (OR). Opragon online provides 24/7 monitoring of key environmental parameters such as temperature, humidity, door openings and ensures that the Opragon system is functioning optimally.

Based on data from your operating suites, Opragon Online enables you to monitor important information from the Opragon system and any attached sensors – from anywhere, at anytime. Status reports and notifications put you in control, enabling you to ensure the safest environmental conditions for both patients and surgical personnel. Optional sensors allow visibility into door openings and opportunities for performance improvement. Automating the monitoring of environmental conditions enables OR managers and the surgical team to focus on delivering world-class care.

Secure data transfer and cloud storage

Operational data from the Opragon and other sensors are obtained from the operating suite’s building automation controller. This data is sent by a secure gateway to a private Microsoft Azure™ cloud-based database. It is a scalable system, both in terms of sensors, users, and theaters, which means that multiple users can see room status and climate for multiple theaters remotely. Advanced data analytics of real-time and historical data provides valuable insights into air quality and important environmental parameters that can affect patient and staff safety.

Avidicare digital services

Three levels of service are available: Bronze, Silver and Gold. The table below provides an overview of functionality and service levels.

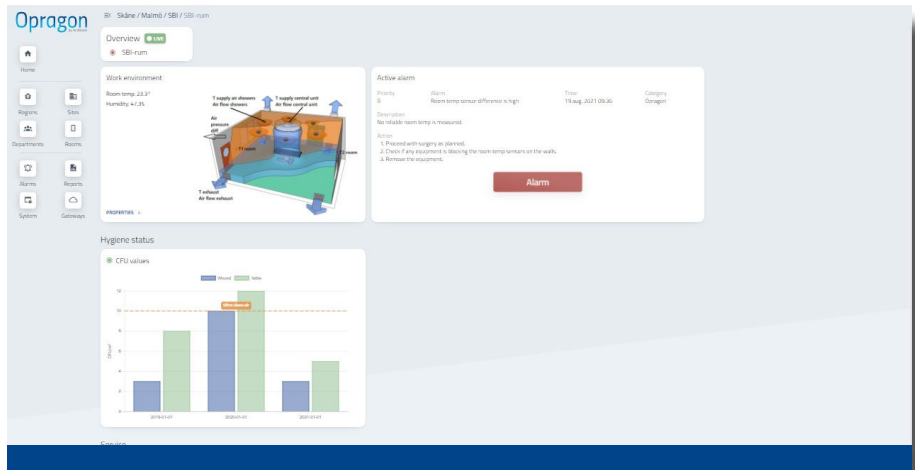

OPRAGON ONLINE SERVICES		Bronze	Silver	Gold
User portal				
·	Overview of rooms/depts/sites/regions	✓	✓	✓
·	Storage of telemetry and system data	✓	✓	✓
·	Standard cockpit view	✓	✓	✓
·	Service level information	✓	✓	✓
·	Status maintenance	✓	✓	✓
Extended user portal				
·	Report generation functionality		✓	✓
·	Extended cockpit view		✓	✓
·	Email and SMS notification		✓	✓
Full digital service support				
·	Surveillance from Avidicare			✓
·	Notification of Opragon functionality restored			✓

Bronze: Be in control of the OR environment

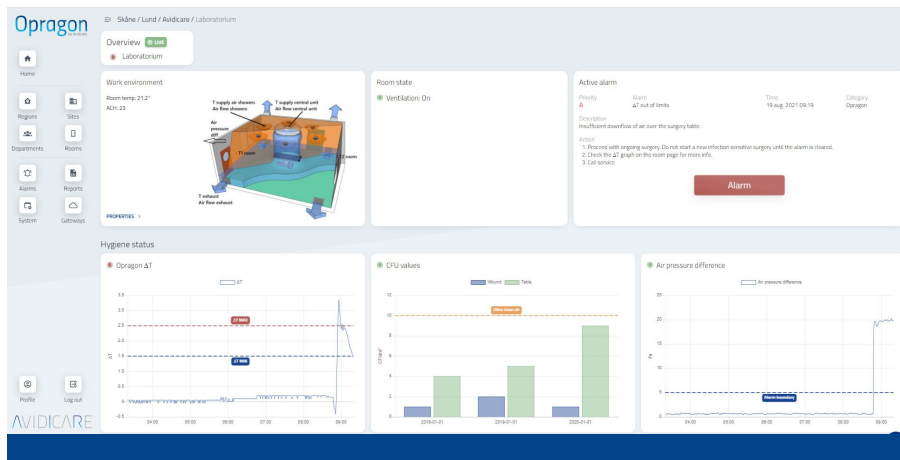

The Bronze level is a self-managed option that includes equipment and installation, access to live room status and historical information about vital parameters with a focus on minimizing airborne contamination. Here you will find answers to questions such as:

- "Is the ventilation operating properly and maintaining desired conditions?"
- "When is service needed?," or
- "What are the room properties?"

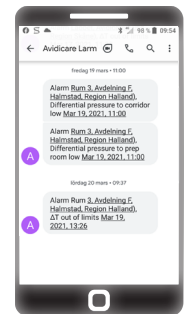

The web portal also helps you to be in administrative control of the services that are active for the room, historical microbial measurement results and service reports.

Silver: Save time and work more efficiently

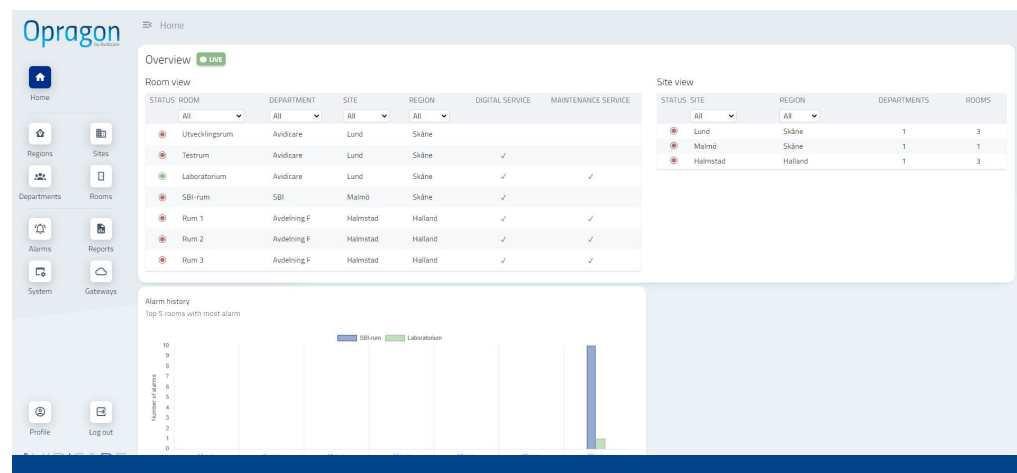

The Silver service level includes extended graphical support to visualize data. Reports can automatically be generated on room climate which allow comparisons over specific periods of time. You also get access to data such as door openings during a procedure or any time period. It includes notifications via SMS or email that can be sent to facilities and other staff outside the operating theater.

Gold: Let us do the job!

The Gold level functional service guarantee provides continuous monitoring by Avidicare or a service partner and proactive service when a notification is received. With Gold service the surgical department has 24/7 support. Avidicare will communicate with facilities personnel and ensure that the actions needed to restore normal operations are undertaken.

Avidicare services support you and increases the value of your investment

Avidicare's portfolio with services includes:

- **Educational services** provide training of how the Opragon system works and how the risk of airborne infections can be reduced. They also include training in the digital services and other tailored training.
- **Development services** help you to optimally integrate the Opragon system into the operating suite as well as specific customizations of the digital services.
- **Maintenance services** ensure that the Opragon system is functioning optimally. A service agreement can be signed for one or more years and contain one or several functions.
- **Customer improvement services** consist of the digital services that help you secure your daily operations by gaining better control, but also improving processes and working more efficiently. Three levels of digital services are available to provide increasing opportunities for improvement.

The service offering is flexible and can be tailored to any operation. Please contact us for more details.

Avidicare services are flexible and customized depending on your needs

Together Towards Zero Infections

Avidicare is committed to the vision "Towards Zero Infections". We work together with healthcare professionals and partners to eliminate airborne infections, especially Surgical Site Infections, in medical facilities.

Today, there are more than 300 Opragon installations protecting patients and staff at leading academic hospitals and specialist clinics in Europe and in the United States. This has allowed for extensive scientific validation of the benefits of the Opragon System including establishing large and robust ultra-clean surgical work areas with low energy use, high installation flexibility and excellent working conditions.

The system is customizable for any surgical workflow and clean hospital area including operating theaters, labs, CSSDs, ICUs, isolation rooms and pharmacies. A set of personal and digital services allow for lifelong reliability.

Avidicare holds six patents and is ISO-certified for quality and environment. The headquarters is based at Medicon Village in Lund, Sweden.
