There is a significance of minimizing foot traffic and airborne bacterial counts in surgical settings to reduce the risk of surgical site infections (SSIs).

Maintaining sterility in the operating room is paramount for preventing SSIs in infection sensitive surgical procedures. One aspect of infection control is the impact of door openings on airborne bacterial counts and overall cleanliness.

Installing new technology can be challenging, particularly within an existing building. A flexible solution is necessary, one that considers the building's construction and limitations. What sets Opragon apart from traditional ultra-clean ventilation systems is its flexibility. It requires as little as 12 inches for plenum installation, providing a fully functional operating theater for infection-sensitive surgeries!
